This Atrocity Of Biblical Proportions Is The 'Final Solution Of The Illuminati': They Censor Effective Meds While Pushing Deadly Ones, Like Using Gas Chambers To Exterminate People In Germany

By Alan Barton for [All News PipeLine](#)

The Hill issued a report ([as shown in this MSN article](#)) back in Early October last year that President Trump received a dose of Remdesivir along with supplemental oxygen at Walter Reed Hospital for his case of covid19 (assumedly c19 at least) and stated that the *“use of Remdesivir means Trump is now on multiple therapeutics to treat his infection. Conley said earlier in the day that the president was given an experimental antibody injection developed by Regeneron. He is also taking zinc, vitamin D, famotidine, melatonin and aspirin”* although the Twit announcement by Kayleigh McEnany said no oxygen was involved. Trump survived, and it was assumed that Remdesivir must be some new magical remedy. I remember thinking that might be the case myself when he had such a rapid turnaround and recovery.

Maybe not so much ---

Another [MSN story](#) on the same day stated *“The president’s physician, Sean P. Conley, released a memo Friday saying Trump received an 8-gram dose of Regeneron’s **polyclonal antibody cocktail** “as a precautionary measure” which it appears more likely to account for his recovery far more than the Remdesivir. Out of Colorado the [UC Health story](#) said that “Some of the therapies that Trump received also are being used for seriously ill COVID-19 patients in Colorado and elsewhere, including the corticosteroid, **dexamethasone**, and, to a lesser degree, the antiviral drug, **remdesivir**” and that “based on small, preliminary studies, hospitalized patients were being given hydroxychloroquine, a repurposed antimalarial, and the antibiotic azithromycin, says Dr. Josh Douin, a University of Colorado School of Medicine anesthesiologist and critical-care medicine specialist.*

Those treatments didn’t pan out, Douin said.”

They seem to be at odds with the WHO on Remdesivir that stated a month later that the first one from The Hill above as shown in this [Yahoo! News article](#), when they claimed that *“World Health Organization on Thursday recommended against continuing to use the antiviral remdesivir to treat COVID-19, saying the drug, which President Trump received in October when he was hospitalized with the coronavirus, has “no meaningful effect on mortality or on other important outcomes for patients.”*

That stinging scientific rebuke comes one month after the U.S. Food and Drug Administration approved remdesivir as a treatment for coronavirus infection, despite limited and conflicting evidence on its effectiveness.”

Trump recovered regardless (or in spite of?) of the use of Remdesivir, but the conflict in opinions on its effectiveness and usage has not changed much in the popular press, so that invites us to look at the more accurate and realistic non-MSM news sources for more detail on Remdesivir and its usage.

A [Heavy.com](#) story from APRIL 2020 on Remdesivir said “an investigational drug that was developed as a way to treat Ebola, but has been undergoing clinical trials in recent months to find out if it could be an option for treating COVID-19 patients.....In early April the first results came in from one of the several remdesivir clinical trials going on concurrently around the world. Those results showed that 68% of people in that trial had improved symptoms thanks to the drug.

Later in the month, another trial concluded that remdesivir did not work. According to [The Guardian](#), “In the trial, 158 patients were randomly assigned to be given remdesivir, while 79 others had standard care with a placebo instead. There was no difference between the groups with respect to recovery time. Just under 14% of those on remdesivir died, compared with nearly 13% of those not taking the treatment.”

The Guardian said this information came from a report accidentally posted by the World Health Organization that was subsequently taken down. According to that report, the trial was halted early in part because some patients were having negative side effects, though the writers did not elaborate as to what those side effects were.”

“White House Correspondent Mark Knoller tweeted Wednesday that the director of the National Institute of Allergy and Infectious Diseases, Dr. Anthony **Fauci**, **believes that clinical results for remdesivir are “very important” because they prove that “a drug can block this virus.”**”

What he did not say was what Fauci had in store for those who took Remdesivir. And I believe that it **may** have included President Trump and the possibility of killing him using it. Thank heavens the doctors at Walter Reed Hospital were apparently not in on that scenario.

(ANP EMERGENCY FUNDRAISER: Due to renewed censorship by 'big tech' upon ANP articles, we'll be [running an emergency fundraising drive](#) over the next month or so until we

catch up on upcoming expenses. We also want to thank everybody who has [donated to ANP](#) over the years. With donations and ad revenue *all that keep ANP online*, if you're able, please consider [donating to ANP to help keep us in this fight for America's](#) future at this absolutely critical time in US history. During a time of systematic, 'big tech' censorship and widespread institutional corruption, truth-seeking media and alternative views are crucial, and EVERY little bit helps more than you could know!)

[NBC News in November](#) last year said “*The antiviral remdesivir should not be used as treatment for hospitalized Covid-19 patients, the World Health Organization said Thursday, only a month after the Food and Drug Administration approved the drug to treat patients over age 12 who are hospitalized with Covid-19.*

Remdesivir, also known as Veklury, and the steroid dexamethasone are the only drugs authorized to treat Covid-19 patients. But a recent massive global study of remdesivir's effectiveness, run by the WHO, showed that remdesivir had little or no impact on hospitalized patients, contradicting previous trials.....there was not enough data about when remdesivir might be effective or for which patients, leading to the decision to discourage its routine use in intensive care.

That means doctors should use remdesivir only occasionally, not as a standard treatment for Covid-19 patients.”

Drugs.com website says this about Remsdesivir:

“Remdesivir is used to treat people with coronavirus disease 2019 (COVID-19) who are in a hospital.....

*Remdesivir is for use only in people with COVID-19 who are in a hospital. **You must remain under the care of a doctor while receiving remdesivir.....***

Remdesivir is given as an infusion into a vein....

Common side effects may include:

nausea; or

abnormal liver function tests.”

And then this one illustrates the problem we are facing; “our government has nothing to offer us in terms of treatment in the hospital but **remdesivir at \$3,100 a dose** and zero treatment options at the critical early stage, when serious complications can be pre-empted. Now, a new study from the University of Iowa shows what we knew all along – that **remdesivir failed to reduce mortality one iota. Why are we to believe the same government entities about embracing the clot shots and shunning so many other cheaper and effective treatments after spending billions and losing countless lives on a failed drug?**” from an [Anti-Empire story](#) last July, continuing “....Among the 2,334 U.S. veterans studied in 124 hospitals, a higher share of remdesivir patients (12.2 percent) who took part in the study died than patients in the control group (10.6 percent). Moreover, on average, remdesivir patients spent six days in the hospital, while control group patients spent only three.....

Contrast this to **ivermectin, which is available for \$25**. A Cochrane-standard (the highest level review) meta-analysis of ivermectin against COVID-19 by Bryant-Lawrie, which has been published in [the American Journal of Therapeutics](#), concluded that **ivermectin reduced fatality in hospitalized patients by 62%**. But more important is getting people to use this immediately in an outpatient setting and, for vulnerable people, even preventively. The study found that “ivermectin prophylaxis reduced covid-19 infection by an average 86%.”

“Inescapably, this is not just a war on hydroxychloroquine, **it’s a visceral opposition to treating the virus with anything that will work and not line the pockets of big pharma. This is a scandal of biblical proportions**. The purveyors of panic themselves are now admitting that the risky shots are not nearly

foolproof against some of the mutations. So how can they ignore risk-free treatments that can save them?

The entire job of public health agencies is to study, invest in, and sort out the best protocols of all the aforementioned treatments, yet that is the one thing they refuse to do and are preventing others from doing. It's scandalous that people who are just getting the virus now have nowhere to turn, while Google completely censors information on lifesaving treatment."

A Final Warning had an interesting story where they said "Remdesivir was originally discovered as part of a program that develops antiviral agents with activity against emerging viruses. In the first months of COVID-19, it was tested as a **potential therapeutic medication** that was found to reduce recovery time for hospitalized COVID-19 patients. It was initially approved by the Food and Drug Administration (FDA) for use in October 2020 and is used as an antiviral treatment of the SARS-CoV-2 infection. Remdesivir is administered intravenously and is usually used in hospitalized patients with severe or advanced cases of the disease. However, **there is not enough evidence of the benefits of using remdesivir as a form of intervention, which is why further studies are being conducted. In clinical trials and case series, adverse effects such as acute kidney injury (AKI) and renal replacement have been linked to the use of remdesivir. Kidney injuries, including proximal tubular epithelial cell necrosis, have also been observed in animal studies during the drug's development. Based on real-life data from around 5,000 COVID-19 patients, it was found that kidney disorders, mostly AKI, that represent a serious and potentially fatal adverse drug reaction of remdesivir, and physicians are encouraged to perform close kidney monitoring when prescribing remdesivir as further data are needed to confirm its safety..... The WHO is clear and consistent about remdesivir: It is neither life-saving nor preventative of the clinical worsening of patients. "**

[The Hill](#) said that Giliad Sciences put a hold on “*administering the experimental antiviral drug remdesivir against the coronavirus that causes COVID-19 due to “overwhelming demand,” according to STAT News and a company statement.*” Perhaps they did have a shortage and perhaps they didn’t finish their trials yet, but I don’t think that is the real reason, there seems to be another that I believe may be closer to the truth.

Even the WHO recommended last year that Remdesivir not be used in C19 patients. *“WHO has issued a conditional recommendation **against** the use of remdesivir in hospitalized patients, regardless of disease severity, as there is currently no evidence that remdesivir improves survival and other outcomes in these patients.....A conditional recommendation is issued when the evidence around the benefits and risks of an intervention are less certain. In this case, there is a conditional recommendation against the use of remdesivir. This means that there isn’t enough evidence to support its use.”*

Sometimes they (WHO) get it right.

“Dr. Bryan Ardis | Hospital Protocols Are Murdering Americans by Prescribing Remdesivir Which Causes Renal Failure” says the headline on a [Rumble video](#), where he explains his research and goes over the reports he used to show the nasty side effects of using some methods of treating C19 including Remdesivir. *“The Safety Board pulled remdesivir from the [Ebola] study because it killed more people than any of the other three drugs remdesivir killed 54% of all the people that got the drug.”* Dr. Ardis also said that people did not die from the C19 virus, but from the Remdesivir which has been shown to cause kidney failure which leads to Pulmonary Edema as well as *“multiple-organ-dysfunction syndrome, septic shock, acute kidney injury, and hypotension”*. He said that hospital and others are saying they died from secondary pneumonia but that is not correct; ***“no it wasn’t, they are shutting down everybody’s kidneys with remdesivir,***

causing their lungs to fill with fluid, and they are drowning them to death.” That is why they are intubating people, to get oxygen to their systems rather than fighting the reason they are so congested to begin with. ***“They are using remdesivir the same way that they used gas chambers to destroy people in Germany. This is how they’re doing it, and perpetuating those deaths, using a drug in hospitals”*** said Dr. Ardis.

[SHTF.TV](#) said ***“Fauci kills people with Remdesivir to make covid look more deadly”*** and included a great [Rumble video](#) on it. Their second video is also very good and calls it “Remdesivir Genocide” and ***“how to get treated for covid or the shot for free. If you go to the hospital you WILL be set up for death based on what they have for the mainstream protocols”***

We have covered this aspect of hospitals before here on ANP [in this story](#) and [this one as well](#).

Looking at the death numbers and the natural influenza infection curves that we have covered, we can see easily that it is not the by now played out flu –err, c19 as they call it now, but the injection of the so-called vax and it’s supposed “boosters” that are still killing people. It is the mismanagement of it by various world health organizations and doctors being operated by corporate money machines called hospital systems that are killing people. They still want to put you on a ventilator, to intubate you after they drug you to sleep so you don’t panic and die from fright and stress, and fill you with drugs that fill your lungs with fluids, seemingly to give you pneumonia as it were, and kill you off for a great financial gain from the federal “health” systems. Very simplified, but that is the bottom line. A year ago hospitals were claimed to be full of covid patients but were actually almost empty except for the ER rooms that were full of those poor souls being murdered by the hospitals because of their faulty protocols that were being implemented that did not work to actually help people recover from the flu or pneumonia. Most of the elective surgeries were delayed or canceled while

only the severe emergencies were admitted, and even they were so often counted as covid kills, errr, deaths to keep the c19 numbers artificially high. Again, ANP has covered that very well. And now the artificial numbers are being reversed, even going so far as to not count c19 VAX deaths as vax deaths by using **14 days AFTER** getting the death shot (usually the second one) before counting them as possible vax caused or related deaths. It is so bad now that even a few MSM outlets are beginning to question that tactic.

The bottom line is this – Covid is a real WEAPONIZED virus that was originally developed in US and Canadian labs, usually college labs, and taken to Wuhan by the NIH and specifically by Fauci to be Enhanced, to be Weaponized as a Bio Weapon for the purpose of getting a dramatically harsher tyrannical dictatorship to quell any thoughts of Liberty and Freedom and to destroy our economy along with our industrial and agricultural production. It has on its own by and large failed except to engender massive FEAR and to get the even more deadly KILL SHOT fake vaccine into every place possible. In combination with the similar goals of the 9/11 conspiracy using fake attacks to get the military industrial complex paid, the more important aspect of it was the “patriot act” which is exactly opposite of what its name implies, as is so common with government evil. The combination of that loss of any security under the name of more security and the loss of any Liberty and decent health under the name of greater health and wellness, we are finished as a nation, and the same thing is going on around the world as a whole with a few notable exceptions of non-participating ones here and there which are being systematically silenced and overthrown as is the US policy and actions the past few decades.

The proof of the c19 farce being a method of destroying lives and society includes the use of drugs that do not heal but instead kill, like Remdesivir and the “vax” while halting use of medications that actually cure the few real cases of c19 but mostly just the seasonal flu is not only discouraged but

forbidden by government and “health” organizations. The c19 virus ran its course a long time ago as any flu bug does, and what we are seeing now is just the results of the killing shots that are being forced upon so many of us now as shown in a number of ANP articles lately. That it is all connected to a much wider conspiracy – NOT a theory, but a very real and valid world conspiracy often referred to as the NWO or the Final Solution of the Illuminati. That was described to some degree in my last article from the 17th titled “***The Across-The-Board Attacks Upon Americans Are Accelerating Rapidly And Include These Multi-Tentacled Facets***”.

Let’s close this episode with some videos that show a bit more on the tales of Remdesivir like this first one with Dr. Ardis from an interview on BrandNewTube.

And this one on Twitter, very short but tells the absolute truth – the one to watch if you are tight on time (need to copy/paste Twitter URL to open)

https://twitter.com/RE_1776/status/1437741120428072962

And to round it out, a review of the plan to depopulate the Earth by killing at least 6 billion people with this Rumble video
